ClearOrbit Streamlines Canon Virginia's Order-to-Delivery Process -

Gemini Mobile Solution Improves Company's Operational Efficiency 40 Percent & Increases Transaction Throughput

AUSTIN, TEXAS, Dec. 19, 2006 -- ClearOrbit (www.clearorbit.com), the leading provider of real-time supply chain execution and reverse logistics solutions, today announced that Canon Virginia, Inc. has streamlined their order-to-delivery process with the implementation of the company's Gemini® Mobile Software solution. By automating the mobile data collection within Canon Virginia's warehouse and distribution operations, Gemini improved overall operational efficiency by increasing inventory accuracy and transaction throughput, and reducing manual and training processes. As a result of the successful Gemini implementation, Canon reports a recently completed extended deployment of Gemini's Manifest Interface Manager (MIM), which improved the company's operational efficiency 40 percent by eliminating process bottlenecks with a direct interface between third-party shipment manifest systems and Oracle applications.

Canon Virginia uses world-renowned production systems and extensive technical and manufacturing expertise to offer manufacturing solutions, including injection mold tools, metal and plastic parts, product manufacturing and reverse manufacturing. "We're extremely pleased with the results

ClearOrbit's Gemini system has produced throughout our distribution operations," said Brian Butterworth, MIS manager for Canon Virginia. "We chose ClearOrbit because of the company's proven success in streamlining manufacturing and distribution processes for global supply chain operations. We're now able to automatically track and identify products, produce labels and manage all distribution operations with our Oracle ERP system, all in real-time with no data delay. As a result, our shipping, receiving, inventory manufacturing, and customer service processes are faster, more accurate and increasingly more efficient."

Gemini's Radio Frequency (RF) product identification and mobile automated data collection capabilities produce real-time data access and visibility. By integrating directly into Canon Virginia's Oracle enterprise resource planning (ERP), Gemini eliminated data synchronization problems, further increasing data accuracy and visibility throughout the company's operations.

Speaking to the extended deployment of ClearOrbit's MIM, Butterworth added, "With MIM, all inventory transaction data is now available in real time and sent directly to the Oracle ERP immediately upon shipment, rather than in nightly batch updates. This real time view of inventory is a big plus for both our distribution center and our customers."

"Our success with Canon Virginia further demonstrates ClearOrbit's unique ability to quickly implement a scalable, ERP-tested solution that improves data integrity across the enterprise," said Warren Sumner, ClearOrbit vice president of marketing and strategy. "It also demonstrates our unparalleled ability to deliver real-time solutions that directly impact bottom line performance for companies across the supply chain landscape. We are privileged to include Canon Virginia among our existing customer base, which includes more than 275 companies in automating and controlling process execution."

About Canon Virginia, Inc.

Located in Newport News, Virginia, Canon Virginia, Inc., uses world-renowned production systems and extensive technical and manufacturing expertise to offer manufacturing solutions, including injection mold tools, metal and plastic parts, product manufacturing and reverse manufacturing. From concept to completion, from innovation to delivery, Canon ensures the reliability of world-class quality and efficiency representative of the Canon name.
